Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission, an IDS, filed on 4/13/04 has been entered.

Allowable Subject Matter

Claims 25-31 are allowed over newly cited Whittle (US 4,082,632). The following is an examiner's statement of reasons for allowance: the prior art does not teach or suggest a method for demetallizing a web to make a singular functional feature of a product unit, the singular functional feature composed of structures formed on each side of the web, the method comprising:

applying a first etch-resistant pattern to a first metal –containing layer of the web, the first metal-containing layer being disposed on a first surface of a substrate of the web, wherein at least a portion of the first pattern substantially defines a first part of the functional feature of the product unit;

applying a second etch-resistant pattern to a second metal-containing layer of the web, the second metal-containing layer being disposed on a second surface of the substrate opposite the first surface, wherein at least a portion of the second pattern substantially defines a second part of the functional feature of the product unit;

exposing both sides of the web to a liquid etchant to effect removal of metal-containing material from areas of the web not protected by the first and second etch-resistant patterns; and washing the etchant from the web, as in the context of claim 25.

Newly cited Whittle, US 4,082,632, teaches a method with a first etch-resistant pattern on a first surface of a web, but does not teach nor is there a suggestion to further include a first metal-containing layer between the pattern and the web, and a second etch-resistant pattern on a second metal-containing layer, the second metal-containing layer being disposed on a second surface opposite the first surface and exposing both sides of the web to a liquid etchant. These are all extra steps, and there is no motivation to add these extra steps to the method of Whittle.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
